Electronic Health Information Export (170.315(b)(10))

Introduction

The Electronic Health Information (EHI) Export allows customers in the inpatient setting to easily export clinical or healthcare data from patient records. Customers can choose to export EHI datasets for a single patient, or all patients in a particular quarter.

EHI Export Use Cases

1. **Bulk EHI export** enables export of all patient data belonging to a quarter.
2. **Single-patient export** is useful when patients request their health information or when their information is shared for referrals or authorized auditing purposes.

Press Ganey creates single patient and bulk patient export file of Electronic Health Information in a QRDA Category I format. Please refer to the link below which provides the data dictionary and additional documentation.
